**Subject:** National Priorities: Transdisciplinary Research into Detecting and Controlling Lead in Drinking Water

Hi Paul, I just tried to forward the message below to you and it bounced back, so I am trying again.

In case you folks haven't seen this...

**Synopsis of Program:**

The U.S. Environmental Protection Agency (EPA) is seeking applications proposing to (1) identify communities that are at a high risk of experiencing the adverse health effects of lead in drinking water; (2) identify opportunities to mitigate these risks; and (3) conduct educational and outreach efforts so that water system managers and the general public are aware of these risks and opportunities.

Miguel - can you send me the data? I don't believe I have it yet.

Thanks!

Hi Paul,

We actually have some sequential data before and after LSL replacement from Flint which I think would be useful so I will send that to you.

**Subject:** Water Testing Post Full LSL Replacement in Childcare Settings

Marc/Miguel -

Greetings for the New Year!!!

Do either of you have recommendations on the preferred frequency of testing water in childcare settings after full lead service line replacement has occurred as a result of emergency repair by the water utility or part of scheduled infrastructure maintenance?

Right now, our department is recommending bottled water (provided by the utility) for 30 days post LSL full replacement and with testing conducted at various intervals after full replacement for assessment and assurance purposes.

Any recommendations you can provide would be greatly appreciated!

Best,

Paul b.
